

Your Best Defense Against Identity Theft

• DEFENDER™ Envelopes •

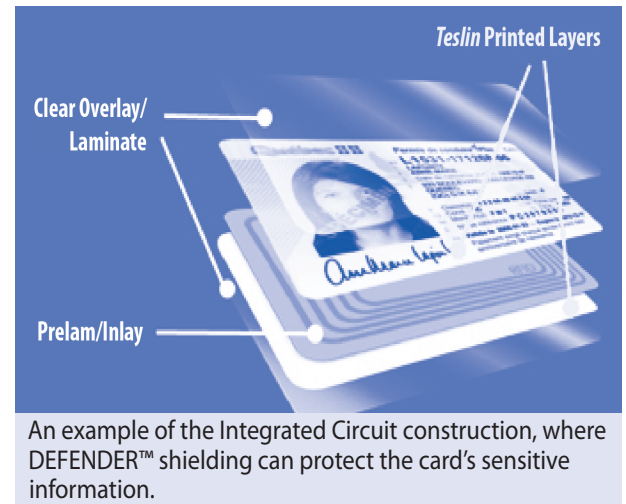

Proven protection against unwanted skimming of private information is built into every DEFENDER™ envelope.

These FIPS 201 (Federal Information Processing Standard) certified envelopes are made from a multi-ply paper/film/foil laminate that prevents fraudulent radio frequency identification (RFID) skimming of sensitive information. This innovative material protects information on smart (debit/credit) cards, e-passports, employee IDs, access control cards and enhanced driver's licenses (EDLs).

DEFENDER's™ advanced design limits the flow of radio frequency energy, so personal information stays personal and protected.

Feel-Secure Features:

- Water-resistant, lightweight and tear-resistant
- Made with Coc certified, 32 lb. archival paper
- Can easily be printed or converted into any size envelope, sleeve, or inserting product
- Can also be made into pressure sensitive adhesive activation labels to protect cards and tags with an integrated circuit (IC)

An example of the Integrated Circuit construction, where DEFENDER™ shielding can protect the card's sensitive information.
